

## INFORMATION FOR PROVIDERS

## Rules of Two™

When does your patient need more than a rescue bronchodilator?

- Does he/she take his/her quick relief inhaler more than 2 times a week?
- Does he/she awaken at night with asthma more than 2 times per month?
- Does he/she refill his/her quick relief inhaler more than two times a year?

If the answer to any of these questions is yes, a controller anti-inflammatory medication may be needed.
