The Parents PACK program at CHOP helps parents take control of their family's health.

Before vaccines, parents would:

- Keep their children out of swimming pools and send them to the country for the summer in an attempt to prevent polio
- Take their children to chickenpox parties, hoping for milder cases when they were younger

These choices were considered necessary because it was the only way to protect their children from harm. **Today** parents can employ the power of vaccines to control their children's exposure to polio, chickenpox and almost a dozen other ravaging infections of childhood.

Parents PACK keeps you up to date on the latest vaccine information so you can choose health for your family.
